PHARMACOGENOMIC ONCOLOGY PANEL

Patient: [redacted] Age/Sex: 54/F Clinician: Dr. [redacted], Medical Oncology Indication: Carcinoma colon, planned CAPOX / FOLFIRI

Gene	Variants tested	Result (genotype)	Interpretation
DPYD	rs3918290 (c.1905+1G>A, *2A), rs55886062 (c.1679T>G, *13), rs67376798 (c.2846A>T), rs56038477 (c.1236G>A, HapB3), rs1801265 (c.85T>C, *9A)	c.1236G>A heterozygous (HapB3); c.85T>C heterozygous; others not detected	Decreased DPD activity possible (HapB3 carrier). Activity score 1.5
UGT1A1	TA repeat (rs3064744) *28; rs4148323 *6	TA6/TA7 (*1/*28)	Intermediate metabolizer
TPMT	*2, *3A, *3B, *3C	*1/*1	Normal metabolizer
NUDT15	rs116855232 (c.415C>T, *3)	c.415C>T heterozygous (*1/*3)	Intermediate metabolizer
CYP2D6	*2, *3, *4, *5, *6, *10, *41, xN	*1/*4	Intermediate metabolizer (AS 1.0)
CYP2C19	*2, *3, *17	*2/*2	Poor metabolizer

Method: Targeted genotyping by real-time PCR (TaqMan) and fragment analysis for the UGT1A1 TA repeat. Only the listed variants are assayed; variants outside this panel cannot be excluded. Reference genome GRCh38. Nomenclature per PharmVar/ClinPGx.
Disclaimer: Results should be interpreted by the treating clinician in the context of clinical findings. This synthetic document was generated for software testing.
